TITLE: Prod'n. of activated carbon adsorbent  
from brown coal - with increased meso-pore content by  
addn. of heavy metal salt before thermal activation

INVENTOR: HOPPE, H; HUSCHENBE, R ; RIEDEL, D ; SCHNEGULA, E  
; WINKLER, F

PATENT-ASSIGNEE: TECH HOCH SCHORLEMM[TEHON]

ABSTRACTED-PUB-NO: DD 218075A

BASIC-ABSTRACT:

Prod'n. of activated carbon from brown coal high-temp. coke  
comprises: (i)  
treatment of the coke with a 3-15 (pref. 5-10) wt.% soln.  
of the salt of a  
heavy metal (pref. Fe(II), Fe(III), Ni or Co); and (ii)  
activation by heating  
to 850-1000 deg.C e.g. in steam. The aq. soln. of the  
heavy metal salt may be

sprayed onto the coke, and the mixt. intensively mixed before being activated.

USE/ADVANTAGE - The prod. can be used for purificn. of water and air. As a result of step (i), the prod. contains, in addn. to a well-formed micropore system, a pronounced mesopore system by which larger mols. are transported more rapidly to the sorption centres. A pronounced meso- and macropore system is necessary in special carbons for purificn. of dye-contg. water or removal or organic impurities in the foodstuffs industry.
